Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vicker in view of Hamilton et al.

There is disclosed in Vicker a brewing device including: a turret frame 10; a turret plate 26, having a plurality of apertures for accommodating a beverage pod arrangement; and a turret shaft 78 for connecting the turret plate to the turret frame.

Hamilton disclose a rotary shaft arrangement including a pair of first connectors (male members, dovetail shaft) e, e attachable to a supporting frame member; and a pair of second connectors (female members, dovetail grooves) j, j attached to a rotary member F.

It would have been obvious to one skilled in the art to substitute the connecting shaft arrangement taught in Vicker with that disclosed in Hamilton, in order to allow easy removal of the turret plate from the turret housing.

In regards to which pair of connectors is the male (dovetail shaft) or female (dovetail groove) member, such is an obvious matter of design choice. Since the function of the two members together is the same once connected.

Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Kaper et al, Sierk et al, Anderson et al and Courtois are cited for their disclosure of the state of the art.
